

ServiceMesh and Cryptosoft Lock Down the Cloud with Advanced Key Management

Improve Cloud Security and Simplify Administration with KMIP-Compliant Key Management

SANTA MONICA, Calif. – October 18, 2011 -- [ServiceMesh](#), provider of the market-leading enterprise cloud platform for Global 2000 companies, today announced that it has integrated Cryptosoft's KMIP-compliant key management solution to provide secure, high-speed encryption key management for the ServiceMesh Agility™ Platform. The integrated solution enables Agility Platform customers to deploy workloads and data securely to private and public clouds using a broadly accepted industry standard to securely manage encryption keys across multiple key stores and certificate authorities.

The Key Management Interoperability Protocol (KMIP), governed by OASIS, establishes a standard for communication between encryption systems and key management systems to simplify management and reduce operational cost.

"Security is at the forefront of every enterprise customer's list of concerns about moving to cloud computing," said Tim Hudson, CTO at Cryptosoft. "The foundation for all security protocols is the secure storage and management of cryptographic keys. By integrating Cryptosoft's versatile KMIP-compliant solution into Agility Platform, enterprise customers can take advantage of secure key storage through a simple, easy-to-use, common interface irrespective of which vendor's key manager is in use."

The ServiceMesh Agility Platform helps enterprise customers unlock the business value of cloud computing, including the empowerment of business units with self-service provisioning and management of standardized and fully governed IaaS, PaaS, and SaaS offerings that improve business agility and lower operating costs. The Agility Platform enables companies to manage the lifecycle and delivery of these services, including governing and securing a company's most sensitive applications and data across internal and external clouds.

"Enterprise customers need comprehensive security solutions for their cloud initiatives," said Anthony Skipper, vice-president of infrastructure and security at ServiceMesh. "The Agility Platform takes an end-to-end approach to cloud security that simplifies security enforcement across instances, networks, data, and user access through automated security policies and zoned security models. By leveraging security standards like KMIP we make these capabilities seamless and easy to use, providing customers with a secure hybrid cloud environment."

About ServiceMesh

ServiceMesh provides the industry's only enterprise cloud platform that enable Agile IT operating models for Global 2000 clients. ServiceMesh solutions consist of advisory services, market-ready IT optimization strategies, and the ServiceMesh Agility Platform™ to automate and manage the lifecycle of cloud-based, "everything-as-a-service" environments.

Enterprise customers select ServiceMesh to design and implement IT strategies that offer game changing competitive advantages through a federation of internal and external IaaS, PaaS, SaaS, and cloud service providers. Customers use the Agility Platform to automate their plan, build, share, and run lifecycle with the security, governance, transparency, identity management, and policy control required by large enterprises. Some of the world's largest and most sophisticated companies in financial services, health care, and other IT-intensive industries rely on ServiceMesh to realize quantum improvements in business agility, lower operating costs, and to enable new business and economic models that support their strategic business initiatives.
