The Communications Security
Establishment of the Government
of Canada

Certificate No. 1305

The National Institute of Standards and Technology, as the United States FIPS 140-2 Cryptographic Module Validation Authority; and the Communications Security Establishment, as the Canadian FIPS 140-2 Cryptographic Module Validation Authority; hereby validate the FIPS 140-2 testing results of the Cryptographic Module identified as:

Red Hat Enterprise Linux 5 Libgcrypt Cryptographic Module by Red Hat®, Inc.

(When operated in FIPS Mode and when obtained, installed and initialized as specified in Section 8.1 of the provided Security Policy. The Security Policy specifies the precise RPM file containing this module. The integrity of the RPM is automatically verified during the installation and the Crypto officer shall not install the module if the RPM tool indicates an integrity error. Any deviation from the specified verification, installation and initialization procedures will result in a non FIPS 140-2 compliant module).

in accordance with the Derived Test Requirements for FIPS 140-2, Security Requirements for Cryptographic Modules. FIPS 140-2 specifies the security requirements that are to be satisfied by a cryptographic module utilized within a security system protecting *Sensitive Information* (United States) or *Protected Information* (Canada) within computer and telecommunications systems (including voice systems).

Products which use the above identified cryptographic module may be labeled as complying with the requirements of FIPS 140-2 so long as the product, throughout its life cycle, continues to use the validated version of the cryptographic module as specified in this certificate. The validation report contains additional details concerning test results. No reliability test has been performed and no warranty of the products by both agencies is either expressed or implied.

This certificate includes details on the scope of conformance and validation authority signatures on the reverse.

TM: A Certification Mark of NIST, which does not imply product endorsement by NIST, the U.S., or Canadian Governments.

FIPS 140-2 provides four increasing, qualitative levels of security: Level 1, Level 2, Level 3, and Level 4. These levels are intended to cover the wide range and potential applications and environments in which cryptographic modules may be employed. The security requirements cover eleven areas related to the secure design and implementation of a cryptographic module. The scope of conformance achieved by the cryptographic modules as tested in the product identified as:

Red Hat Enterprise Linux 5 Libcrypt Cryptographic Module by Red Hat®, Inc.
(Software Version: 1.0; Software)

and tested by the Cryptographic Module Testing accredited laboratory:
is as follows:

atsec information security corporation, NVLAP Lab Code 200658-0
CRYPTIK Version 7.0

Cryptographic Module Specification: Level 1
Roles, Services, and Authentication: Level 1
Physical Security: Level N/A
(Multi-Chip Standalone)
EMI/EMC: Level 1
Design Assurance: Level 1
Operational Environment: Level 1

Cryptographic Module Ports and Interfaces: Level 1
Finite State Model: Level 1
Cryptographic Key Management: Level 1
Self-Tests: Level 1
Mitigation of Other Attacks: Level 1

tested in the following configuration(s): Red Hat Enterprise Linux 5.4
(single-user mode)

The following FIPS approved Cryptographic Algorithms are used:

AES (Certs. #1180, #1192 and #1193); Triple-DES (Certs. #851, #859 and #860);
SHS (Certs. #1089, #1098 and #1099); RSA (Certs. #561, #570 and #571);
DSA (Certs. #389, #393 and #394); HMAC (Certs. #680, #691 and #692);
RNG (Certs. #651, #658 and #659)

The cryptographic module also contains the following non-FIPS approved algorithms: MD5

Overall Level Achieved: 1
